MAIN OBJECTIVE

Finding a job as a Junior Geospatial Data Science

ABOUT ME

I love geography. I believe it is present in every aspect of our lives, not only because we live in a geographical space and everything can be georeferenced, but also because we are deeply influenced by the environment around us.

This is exactly why the power of GIS captivates me, as it allows us to map, analyze and interpret geographical data in order to better understand the space in which we live.

CURRENTLY

I work as a Financial Analyst on Human Capital projects under the Community Funds.

I recently completed a postgraduate degree in Geospatial Data Science and I intend to **direct my career towards Geographic Information Systems**, which is the area I am most passionate about and to which I want to be deeply dedicated.

TOOLS

Softwares:

ArcGIS Pro, Excel (VBA), Power BI (DAX)

Programming languages:

SQL and Python (I have some knowledge, but I'm not proficient)

COMUNICACION

Portuguese ★★★★★
English ★★★★★
Spanish ★★★★★

PROFESSIONAL EXPERIENCE

Company: MSC - Mediterranean Shipping Company
Role: Managing and monitoring the maritime export process

abr 2019 - oct 2019

EDUCATION

POSTGRADUATE // GEOSPATIAL DATA SCIENCE

University: NOVA IMS - Information Management School

The postgraduate course in Geographic Information Systems (GIS) focused essentially on the analysis, modeling and visualization of geographic data using ArcGIS Pro, with the aim of mapping georeferenced information.

In addition, it also explored knowledge of Cartography, Remote Sensing, Spatial Statistics, Spatial Databases, as well as, computing environments such as Programming (Python and SQL), and the application of Predictive Models with Data Mining, through KNIME, aimed at processing geospatial data.
